PROFESSIONAL SUMMARY

Computer Science undergraduate (CGPA: 9.4/10) with hands-on experience in designing and developing scalable backend applications using Java, Spring Boot, REST APIs, SQL, Docker, AWS, Redis, and Kafka. Strong computer science fundamentals in Data Structures Algorithms, Object-Oriented Programming, Operating Systems, DBMS, and Computer Networks, supported by practical software engineering experience through internships and full-stack projects. Demonstrated problem-solving ability with 500+ LeetCode problems and a strong interest in building scalable, reliable, and high-performance software systems.

EXPERIENCE

OneTappe

Jul. 2026 – Present

Backend Developer Intern

Bangalore, India

- Developing scalable REST APIs using Java and Spring Boot following layered architecture and Agile practices.
- Optimizing PostgreSQL, MySQL, and MongoDB databases through efficient schema design, indexing, and query optimization.
- Building event-driven backend components using Kafka and RabbitMQ for asynchronous message processing.
- Implementing JWT authentication, Redis caching, and deploying containerized services using Docker and AWS.

Infyntrek Systems

Feb. 2026 – Apr. 2026

Java Developer Intern

Bangalore, India

- Developed and maintained REST APIs using Java and Spring Boot in a production Agile environment.
- Improved backend module maintainability and debugging efficiency through structured code refactoring.
- Collaborated via Git-based workflows with cross-functional teams across sprint cycles.

PROJECTS

OrbitMQ | Java, TCP/NIO, Gradle, JUnit

GitHub: github.com/mimansa05/OrbitMQ

- Designed a custom length-prefixed binary protocol over raw TCP for producer-consumer communication, eliminating HTTP overhead.
- Built a partitioned append-only log storage engine with persistent segment files and offset indexing for durable message storage.
- Implemented leader-follower replication with ISR-style acknowledgements and automatic failover for fault tolerance.
- Added consumer group offset tracking to support independent consumption progress and at-least-once message delivery guarantees.

Trace360 | Spring Boot, React, WebSocket, JWT, MySQL/PostgreSQL

Live: trace360.vercel.app

- Real-time logistics tracking platform with live map-based package tracking and GPS updates.
- Designed and implemented WebSocket-based event streaming for sub-second location refresh.

FarmSync | Java, Spring Boot, React, MySQL

Live: farm-sync123.vercel.app

- Agricultural analytics platform featuring expense tracking, farmer insights dashboard, and data visualization modules targeting smallholder farming efficiency.

SKILLS

Languages: Java, Python, C, JavaScript, SQL

Backend: Spring Boot, REST APIs, Spring MVC, Hibernate, JPA, JWT Authentication, WebSocket

Frontend: React.js, HTML, CSS

Databases: MySQL, PostgreSQL, MongoDB, Database Design, Query Optimization

Cloud & DevOps: AWS, Docker, Redis, Kafka

Tools: Git, GitHub, IntelliJ IDEA, VS Code, Postman, Maven

Software Engineering: Agile/Scrum, SDLC, Debugging, Unit Testing, API Testing

Core CS: Data Structures & Algorithms, Object-Oriented Programming (OOP), Operating Systems, Computer Networks, TCP/IP Fundamentals, Routing & Switching (Basics), DBMS, System Design (Fundamentals), Distributed Systems

EDUCATION

B.M.S. College of Engineering (BMSCE)

B.Tech in Computer Science & Engineering (4th Semester)

Expected 2028

Bangalore, Karnataka

- **Academic Standing:** Cumulative GPA: 9.4/10.0

ACHIEVEMENTS

- Selected to participate in an ISRO student outreach programme conducted by the Indian Institute of Remote Sensing (IIRS), Dehradun.
- Contributed to open-source projects by submitting code improvements, bug fixes, and feature enhancements through GitHub pull requests.
- Solved 500+ DSA problems across all topics on LeetCode; Contest Rating: 1578.
- Top 5 finish at CodeForge Hackathon among 50+ competing teams.
- Runner-Up at Algothon Hackathon.
